

Consistent appearance across the project

Through the separation of function and appearance on CSS3 (Cascading Style Sheets), a variety of predefined styles are available for selection within the project.

You can change the appearance across the project with a single click. Your project always looks like it's from one source. What's more, minimum effort is needed to make subsequent changes or customise the project.

PASvisu glass style

PASvisu dark style

PASvisu blue style

PASvisu pilz style

Select various style specifications with a single click.

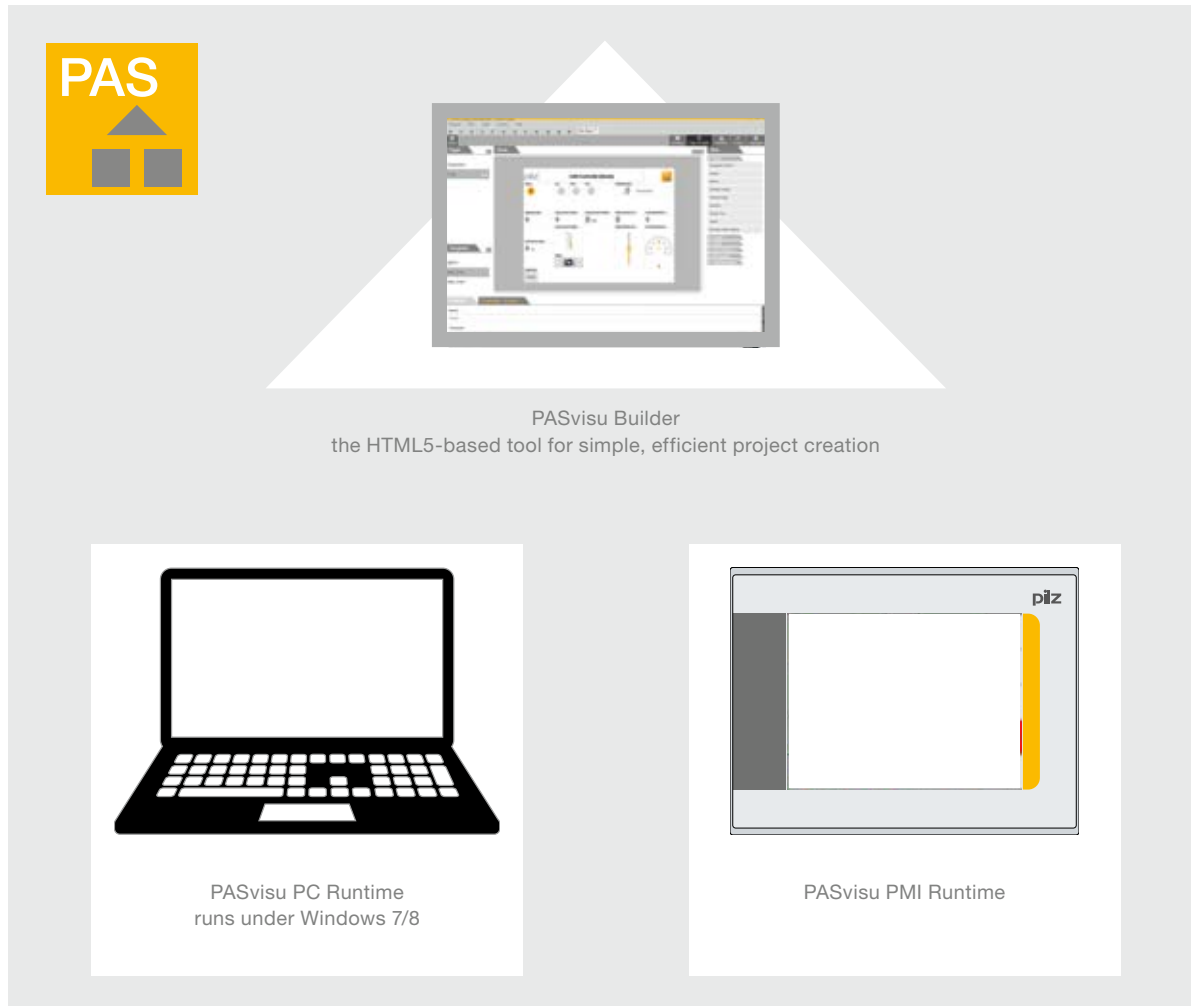

Simulation – faster configuration

Offline simulation without access to the controller makes configuration easier with the help of a special offline variable editor, which can be used to set and display values. Online simulation is also possible, of course. So you can create easy-to-use visualisation projects and manage your automation tasks quickly and safely.

Templates – simple, convenient! 12 different templates are available to help you create individual visualisation projects.

Structure of PASvisu

The easy-to-use, intuitive HMI software consists of the configuration tool PASvisu Builder and PASvisu Runtime.
